

Sai Nath University

Assignment For Diploma in Electronics & Comm Engineering 1st SEM.

The Assignment will consist of two parts, A and B. Part A will have 5 short answer questions(40-60 words) of 4 marks each. Part B will have 2 long answer questions of 10 marks each

All questions are compulsory.

These Assignments should be completed and submitted in written form by the student to his/her respective Faculty/Examiner. Assignment Submission Dates are:

➤ Nov-17

List Of Suggested Questions

The list of suggested questions are for students to practice. Although optional, we recommend that students solve these questions, as they will help them in preparing for exams as well as in clearing the important concepts of the subject.

List of Practicals and suggested practicals

The list of practical's should be done by the students in their Lab Sessions. These are the basic practical's, which each student should be able to do himself independently. While the list of suggested practicals are optional, but it is recommended that students should perform those practical so as to have a thorough knowledge of the subject

Education Delivery Schedule (EDS)

As per University Semester scheme, the minimum contact hours of each paper has been Divided into two hours theory and practical class.

The faculty will maintain this attendance paper wise for his/her batch.

Communication Skills

Part A

1. What is professionalism ? Define with an example ?
2. What are different barriers to communications ?
3. What are psychological barriers ?
4. What is premature Evaluation ?
5. What are the seven Cs of Professionalism?

Part B

1. What are the ways by which we can remove noise in the communication ?
2. What are the different ways by which we can reduce our hesitation of speaking?

DECE-102

[ENGINEERING MATHEMATICS]

Part A

1. Resolve $\frac{5x+12}{(x+2)(x+3)}$ into partial functions.
2. Expand $(x^2+2y)^5$ by the binomial theorem.
3. Find the value of $(.98)^{-3}$ up to 2 decimal places.
4. Prove that $\sin^2 \frac{\pi}{6} + \cos^2 \frac{\pi}{3} - \tan^2 \frac{\pi}{4} = -1/2$.
5. prove that $\sin \frac{7\pi}{12} \cos \frac{\pi}{4} - \cos \frac{7\pi}{12} \sin \frac{\pi}{4} = \frac{\sqrt{3}}{2}$

Part B

1. Expand the determinant
$$\begin{vmatrix} 6 & 2 & 3 \\ 2 & 3 & 5 \\ 4 & 2 & 1 \end{vmatrix}$$
2. show that $\cot 2x \cot x - \cot 3x \cot 2x - \cot 3x \cot x = 1$

DECE-103
[Applied PHYSICS]
Part A

1. What is dopplers effect? Deduce the expression of apparent frequency of sound for the relative motion between the source and observer.
2. Derive an expression of energy of plane progressive sound wave of sure form and hence obtain the expression for energy current (i.e., intensity of sound waves).
3. Differentiate between longitudinal and transverse waves. How are these produced.
4. What do you understand by superposition of waves ? Under what conditions the stationary waves, beats are interference are produced.
5. State the characteristics of a plane progressive waves. Deduce the expression of simple harmonic.

Part B

1. Explain systematic and random errors with the help of an example.
2. What do you mean by dimension of physical quantity? Give the dimensions and units of energy,

DECE-104
[Applied Chemistry]
Part A

1. What are quantum numbers and types of quantum numbers.
2. What is the difference between an orbit and an orbital's ? What do you know about p-orbital ? describe in brief.
3. Write a note on de-Broglie's equation.
4. State Pauli's exclusion principle.
5. Write the electronic configurations of atom cr, cu, zn, Fe, Na ca al, cl.

Part B

1. What is Electrochemical cell? Explain with example of Dexial cell
2. What is polymers and types of polymers?
